

Martin Kulev

Full Stack .NET Developer

About me

Motivated Full-Stack .NET Developer with **2 years of professional hands-on experience** building scalable **backend systems**, real-time gaming logic, and high-performance **web applications** in the iGaming industry. Experienced in developing **microservices**, optimising performance-critical systems, integrating third-party APIs, and improving internal tooling using modern .NET technologies, alongside databases, frontend, and DevOps experience.

Work Experience

JULY 2024 – NOW

Full-Stack .NET Developer, The Better Platform

- Designed and developed a fully functional Jackpot microservice within the first 3 months of joining the company.
- Created the architecture for the Jackpot service independently, focusing on scalability, maintainability, and low-latency real-time processing.
- Built a reusable TCP/IP communication layer that was later reused for additional gaming features and services.
- Independently architected and developed the Tournament and Prize Drop microservices using the reusable infrastructure created for the Jackpot service.
- Developed a separate roulette engine responsible for handling isolated roulette logic and real-time betting behaviour.
- Implemented a heartbeat-based communication architecture to improve efficiency and minimise unnecessary processing overhead.
- Improved performance by introducing delayed database update strategies for non-critical operations, reducing database load during heavy activity.
- Continuously improved existing betting logic and backend workflows to increase overall platform efficiency and reliability.
- Integrated new casino partners through external APIs while focusing on scalability, maintainability, and minimising unnecessary API calls and latency.
- Worked extensively on a Blazor-based backoffice system, improving performance and optimising inefficient existing pages and workflows.
- Developed management and configuration logic within the backoffice for controlling platform-wide settings related to Jackpot, Tournament, Prize Drop, Roulette, and other gaming systems.
- Contributed to the development of a new backoffice application using React and ASP.NET Core.
- Participated in upgrading multiple projects from .NET 5 to .NET 8 and later from .NET 8 to .NET 10, including handling deprecated libraries.
- Took ownership of major backend systems after the departure of the team lead and became the most senior member of the team.

JANUARY 2024 – JUNE 2024

Programming Instructor, Logiscool

Taught children the fundamentals of programming.

Education

SEPTEMBER 2021 - MAY 2024

Full-Stack .NET Developer, SoftUni

SEPTEMBER 2019 – MAY 2024

Computer Engineering and Technologies, SPGE "John Atanasov"

Tech Stack

Backend

- C#
- .NET 5, .NET 8, .NET 10
- EF Core
- ASP.NET Core

Frontend

- JavaScript
- TypeScript
- React
- Blazor
- ASP.NET MVC
- HTML & CSS (Bootstrap)

Databases

- PostgreSQL
- MSSQL
- MySQL
- Redis

DevOps

- Azure
- Docker
- Kubernetes
- CI/CD Pipelines

Tools

- Git
- Jira

Languages

- Bulgarian (Native)
- English (Fluent)
- German (Beginner)
